

# Software Requirements Specification (SRS)

## Job Portal / Job Hunt Platform

Version 1.0 · 26 May 2026

### 1. Abstract

This document contains the Software Requirements Specification for the Job Portal project.

## 2. Table of Contents

1. Abstract
2. Introduction
3. Overall Description
4. Functional Requirements
5. Non-Functional Requirements
6. Database Design
7. APIs
8. Security
9. Testing
10. Diagrams and Screenshots

## 3. Introduction

See SRS sections for detailed introduction, purpose, scope and references.

### 3.1 Purpose

Provide a central web platform to post and apply to jobs.

### 3.2 Scope

Web application: React frontend, Node/Express backend, MongoDB database and Cloudinary for assets.

## 4. Functional Requirements (Selected)

| ID    | Requirement       | Acceptance Criteria                           |
|-------|-------------------|-----------------------------------------------|
| FR-1  | User Registration | User persisted in DB; hashed password         |
| FR-2  | User Login        | Cookie token set; user returned               |
| FR-8  | Post Job          | Job document created with company reference   |
| FR-12 | Apply Job         | Application created; job.applications updated |

## 5. Database Design

Entities: User, Company, Job, Application. See ER diagram below.

ER Diagram

## 6. API Summary

| Endpoint                    | Method | Auth | Purpose        |
|-----------------------------|--------|------|----------------|
| /api/v1/user/register       | POST   | No   | Register user  |
| /api/v1/user/login          | POST   | No   | Login          |
| /api/v1/user/profile/update | POST   | Yes  | Update profile |
| /api/v1/job/post            | POST   | Yes  | Post job       |

## 7. Security

Recommendations: set cookie httpOnly & secure; validate uploads; rate-limit login; add owner checks.

## 8. Testing

Use Jest, Supertest for backend; React Testing Library for frontend; Cypress for E2E.

## 9. Diagrams

System Architecture
